## Energy saving, style and comfort in perfect harmony

The Haverland 'Designer' TT range offers complete, integrated heating systems and standalone heating solutions. Five different thermal transmitter sizes and a variety of thermal outputs ensure that all specific installation requirements can be met - perfectly.

'Designer' TT is based on advanced 'Therma Max', a high density, inertia media, specially developed to store and transmit warmth for longer periods than traditional radiators. This is complemented by digital technology that lets users select their own comfort level. More thermal output for less energy input, plus more control over your environment - the 'Designer' TT range makes savings with style and comfort.

**Model RC 4 TT**

AND OFFICE

## Advanced, reliable, versatile: 'Designer' TT is the ideal choice... anywhere

For homes, shops and offices, new 'Designer' TT, with its clean, modern lines enhances any design scheme. Warm and welcoming for the home and an elegant complement to the retail or business environment, it's the ideal alternative to traditional heating options.

Unlike conventional central heating, 'Designer' TT uses a clean technology that keeps interior design schemes stain, dust and soot free. Its slim profile maximises room space, and there's no boiler to service, which means reduced maintenance costs.

All while providing the ultimate warm, individually controlled, personal comfort zone - and the answer to the electrical installer's dreams.
